

Benefits of Softengine Shipping - UPS

Softengine Shipping – UPS Solution saves time and stops shipping errors. It integrates directly with UPS WorldShip service. It improves greatly your shipping operation efficiency, provides better customer service, and it increases your billing accuracy. It is ideal for all companies managing parcel shipments who want to extend order fulfillment visibility both internally (customer service and accounting), and externally (to customer orders in transit).

Seamless Integration to SAP Business One

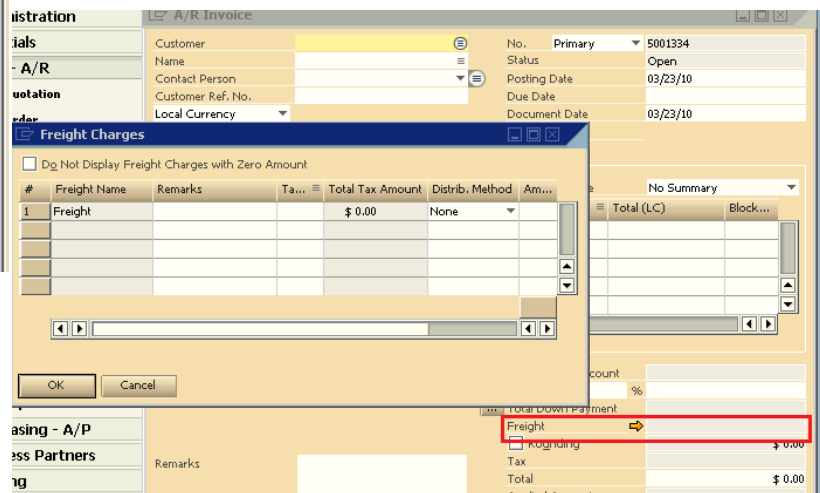

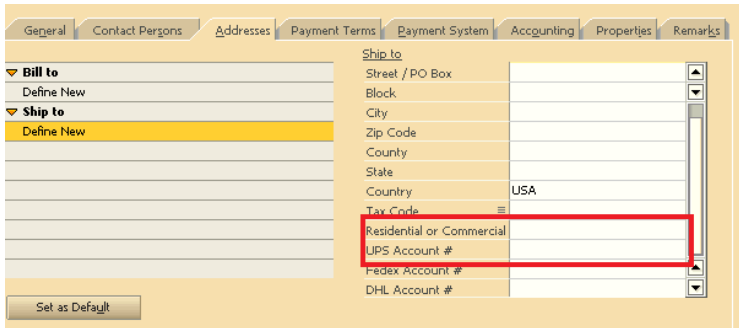

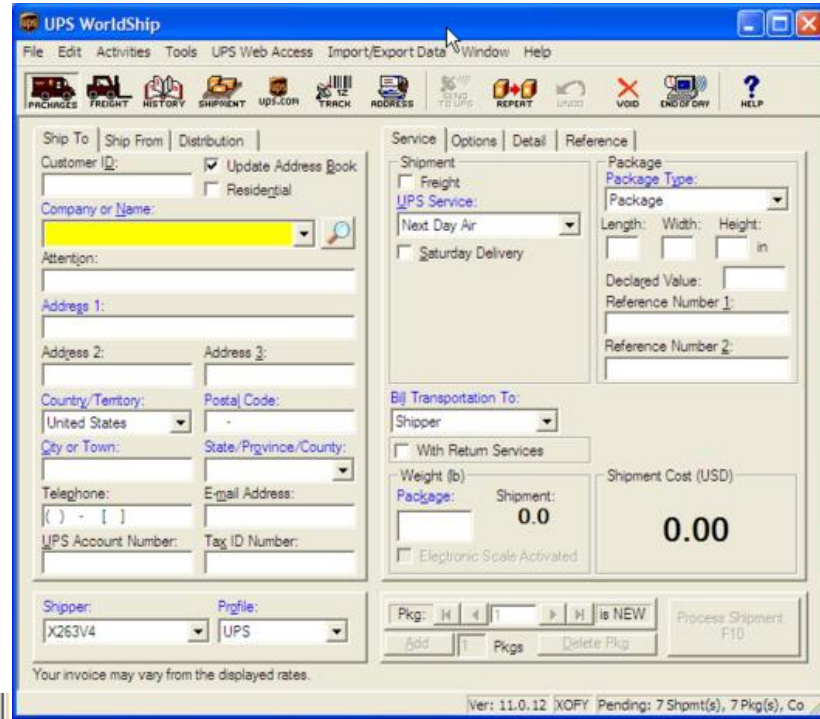

Setup is quick and easy with SAP look and feel and self-explanatory functionality.

No more returns with wrong address – with Address Verification you can be sure the package will be delivered. Rates and Delivery Dates are calculated accurately based on the Packaging, Sizes (Weight, Height) and Delivery Requirements. Integration with UPS WorldShip avoids double entry and enables Shipping Label printing, e-mailing and tracking number posting to SAP Business One.

All SAP Documents integration means a clear process flow: from sales order and freight quote to a delivery with tracking number to an invoice with actual freight charges.

Real Freight Costs from WorldShip for better Profitability

Customer service staff can utilize “Get Online Carrier Quote” function that is aware of Rate Increases and Additional Charges in the Total Freight calculation. The system will preserve the Total Quote to Customer.

Improved Productivity & Customer Service

Allowing UPS to break the Delivery into multiple packages combined with the ability to track each individual package means less time spent in Pick and Pack manager – and better visibility. Advanced e-mail notifications are sent to customers upon shipment and orders can be tracked on-line. Shipping charges are automatically posted for accurate billing in SAP Business One.
